Lauryl Methacrylate
1215 F (LMA 1215 F)

Methacrylic acid ester, for manufacturing polymers and for use as a feed stock for syntheses

\[

\text{CH}_3 & \quad \text{O} \\
\text{H}_2\text{C} & \quad \text{C} \\
& \quad \text{C} \\
& \quad \text{O} \\
& \quad \text{C}_{12}\text{H}_{25} / \text{C}_{13}\text{H}_{27} / \text{C}_{14}\text{H}_{29} / \text{C}_{15}\text{H}_{31}
\end{align*}
\]

CAS No.: 90552-02-6
EINECS No.: 292-122-8

Molar mass:
\[\text{C}_{16}\text{H}_{30}\text{O}_2 \quad 254.4 \text{ kg/kmol (C}_{12}\text{)}
\]
\[\text{C}_{17}\text{H}_{32}\text{O}_2 \quad 268.4 \text{ kg/kmol (C}_{13}\text{)}
\]
\[\text{C}_{18}\text{H}_{34}\text{O}_2 \quad 282.5 \text{ kg/kmol (C}_{14}\text{)}
\]
\[\text{C}_{19}\text{H}_{36}\text{O}_2 \quad 296.5 \text{ kg/kmol (C}_{15}\text{)}
\]

Product specification
- Assay (Gas chromatography) min. 98.0 %
- Water content (ASTM E 203) max. 0.1 %
- Acid content (calc. as methacrylic acid ASTM D 1613) max. 0.02 %
- Color on dispatch (APHA, ASTM D 1209) max. 150
- Standard stabilization (HPLC) 175 ± 25 ppm MEHQ

The aforementioned data shall constitute the agreed contractual quality of the product at the time of passing of risk. The data are controlled at regular intervals as part of our quality assurance program. Neither these data nor the properties of product specimens shall imply any legally binding guarantee of certain properties or of fitness for a specific purpose. No liability of ours can be derived therefrom.

Other properties
- Appearance: clear, colorless to yellow liquid
- ≤C\text{11} ester / C\text{12} ester max. 0.5 % / 19 – 25 %
- C\text{13} ester / C\text{14} ester 28 – 34 % / 27 – 33 %
- C\text{15} ester / ≥C\text{16} ester 15 – 21 % / max. 1.5 %
- Density at 20 °C 0.87 g/cm³
- Boiling point (ASTM D 1078-99) > 300 °C
- Melting point / Flash point – 10 °C / > 95 °C

Labelling according to local Directives
see SDS
Applications

Lauryl Methacrylate 1215 F (LMA 1215 F) forms homopolymers and copolymers. Copolymers of Lauryl Methacrylate 1215 F (LMA 1215 F) can be prepared with (meth)acrylic acid and its salts, amides and esters, and with methacrylates, acrylonitrile, maleic acid esters, vinyl acetate, vinyl chloride, vinylidene chloride, styrene, butadiene, unsaturated polyesters and drying oils, etc. Lauryl Methacrylate 1215 F (LMA 1215 F) is also a very useful feedstock for chemical syntheses, because it readily undergoes addition reactions with a wide variety of organic and inorganic compounds.

Lauryl Methacrylate 1215 F (LMA 1215 F) is used in oil additives as flow/viscosity index improver for highly paraffinic oils and as pour point depressant. Lauryl Methacrylate 1215 F (LMA 1215 F) may also be employed in textile finishes, varnishes, pressure-sensitive adhesives or as co-monomer in paint-resins & plastics.

Features & Benefits

Lauryl Methacrylate 1215 F (LMA 1215 F) can be used to impart the following properties to polymers:

- Hydrophobicity
- Low shrinkage
- Water/Chemical resistance
- Flexibility
- Impact strength
- Adhesion

Storage & Handling

In order to prevent polymerization, Lauryl Methacrylate 1215 F (LMA 1215 F) must always be stored under air, and never under inert gases. The presence of oxygen is required for the stabilizer to function effectively. It has to contain a stabilizer and the storage temperature must not exceed 35 °C. Under these conditions, a storage stability of one year can be expected upon delivery. In order to minimize the likelihood of overstorage, the storage procedure should strictly follow the “first-in-first-out” principle. For extended storage periods over 4 weeks it is advisable to replenish the dissolved oxygen content.

If accidently product is crystallized the product should never be partially molten and taken, because the possible separation from the stabilizer. Ensure that there is no crystallized product in the container before use. Obtain information from supplier/manufaturer before dissolving totally or partially crystallized product. The heating temperature may not exceed the stated temperature limit during melting of the product. Warming the product in a room of 20 – 25 °C over several days is the preffered option.

The preferred construction material for tanks and pipes is stainless steel. Carbon steel is also acceptable, although the formation of rust may be a problem with product quality (color). Iron(III)-ions have been shown to be a weak polymerization initiator. If carbon steel is to be used, special procedures should be used to prepare the tank for use. Storage tanks, pumps and pipes should be earthed.

Safety

A Safety Data Sheet has been compiled for Lauryl Methacrylate 1215 F (LMA 1215 F) that contains up-to-date information on questions relevant to safety.
Note

The data contained in this publication are based on our current knowledge and experience. In view of the many factors that may affect processing and application of our product, these data do not relieve processors from carrying out their own investigations and tests; neither do these data imply any guarantee of certain properties, nor the suitability of the product for a specific purpose. Any descriptions, drawings, photographs, data, proportions, weights etc. given herein may change without prior information and do not constitute the agreed contractual quality of the product. It is the responsibility of the recipient of our products to ensure that any proprietary rights and existing laws and legislation are observed.
